

SOME BIOLOGICAL RESEARCHES ON BEET ARMY
WORM IN THE SHIRAZ REGION OF IRAN¹

E. EGHTEDAR²

SUMMARY

According to the investigations carried out from 1971 - 1975 in Shiraz region of Iran, *Spodoptera exigua* Hb. has six generations in a year. Some researches have been done on some biological features and the connection existed between the appearance of the moths in the nature and the environmental temperatures (for more details refer to the Tables in Farsi text which are presented in both Farsi and English languages).

1 - Received for publication, November 12, 1987.
