

INVESTIGATIONS ON *Pentodon idiota* Herbst

IN KHOOZESTAN¹

GH. JEMSI - NOBANDEGANI², M. HASSANI - ZADEH

& A. FARHAM

SUMMARY

P. idiota is an important pest of sugar cane in Khoozestan province of Iran. It overwinters as different stages of larvae and adults. It takes 15 - 20 months for a generation to be achieved. This insect prefers silty clay loam and silty clay soil to live in (for more detail refer to the tables in Farsi text prepared in both Farsi and English languages).
