THE FAUNA OF COCCINELLIDAE IN
ESFAHAN PROVINCE (1)

H. FATEMI (2)

SUMMARY

Up to 1971, twelve species of Coccinellidae had been reported from the region of ESFAHAN by VODJDANI, 1965 and NAIM, 1971.

During the recent five years, we have been able to collect seven other species of this family which have been seen, except two, feeding on mites, aphids and scale insects.

To have more details we suggest referring to the persian text.
