I wrote an article about "The Genital-morphological differences between *Euzophera bigella* Zeller and *Euzophera punicaeella* Moore", which has been published in No. 33 "Entomologie et Phytopathologie Appliquées".

In above mentioned article the *Euzophera punicaeella* Moore was mentioned as scientific name for the pomegranate moth. With further investigation and discussion with Dr. ULRICH ROESLER (The head of the Department of Entomology in the Museum of Karlsruhe and well known specialist of family *Pyrilidae*), the specific nomenclature for pomegranate moth was defined as:

Spectrobates ceratoniae Zeller, whereas *E. punicaeella* Moore is a synonymy of *E. bigella* Zeller.
